DETAILED ACTION

Response to Arguments

1. The applicant has argued that Renkes et al. is silent with respect to a run capacitor/positive temperature coefficient resistor/overload (CAP/PTCR/OL) assembly cover configured to couple to a PTCR/OL base comprising plurality of sidewalls that extend from a first surface and are integrally formed with the first surface, the sidewalls extend from the first surface and form a compartment that is sized to at least partially receive a run capacitor. The examiner finds this argument persuasive. Therefore, the examiner made decision to allow this limitation over the prior art of record.

Allowable Subject Matter

2. Claims 18-33 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 18-33, the prior art alone or in combination does not teach the limitation of a run capacitor/positive temperature coefficient resistor/overload (CAP/PTCR/OL) assembly cover configured to couple to a PTCR/OL base comprising plurality of sidewalls that extend from a first surface and are integrally formed with the first surface, the sidewalls extend from the first surface and form a compartment that is sized to at least partially receive a run capacitor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
